The global DFN and QFN Packages market size is predicted to grow from US$ 5505 million in 2024 to US$ 6580 million in 2030; it is expected to grow at a CAGR of 3.0% from 2024 to 2030.

QFN package is an emerging surface mount chip packaging technology with small pad size, small volume and plastic as sealing material. The appearance is square or rectangular. It is suitable for high frequency, radio frequency and other applications.

DFN package is a No-leads packaging technology with a Dual Flat structure. It has a smaller size and lower profile than traditional packages. DFN package is usually manufactured using advanced semiconductor processes. Through precision manufacturing processes, the chip is encapsulated in a thin and strong plastic or ceramic substrate, and micro-arc welding or other high-precision connection technologies are used to connect the chip to the pad to achieve electrical and mechanical connections.

The main forms of QFN and DFN packages include QFN16L-80L, DFN2L-16L, etc. The downstream can be mainly used for security chips, automotive electronics, medical equipment electronics, digital video, radio frequency, data acquisition, level converters, inverters, general MCUs, car audio processors, lithium battery charging management chips, etc.

The main feature of QFN and DFN packages is that they occupy a smaller area of ??PCB. With low cost and small size, QFN/DFN packaging will be a growth point in the
