A Diabetic Insulin Cooler is a device used for store insulin, Insulin is a naturally occurring, glucose-lowering hormone used by many people with diabetes to control their blood sugar. Insulin is manufactured to be identical to the insulin produced by the human pancreas. These synthetic insulins can work from a few hours (rapid-acting insulin) to a whole day (long-acting insulin). They are typically injected via a needle or pen. All insulins must be stored with care to ensure that they remain safe and effective. Improper storage could result in the breakdown of insulin, affecting its ability to effectively and predictably control your blood sugar level.
