Diagnostic wearable medical devices are used to monitor, control, and track an individual's vital signs at regular intervals. These devices are connected to an individual's body for the measurement of certain physiological information. They are available in the form of eyeglasses, watch, clothing, jewelry, and contact lenses. Diagnostic wearable medical devices monitor physiological data through remote or wireless communication and transmit this information to medical professionals or the user. These are autonomous, non-invasive devices that help assess specific medical functions such as blood pressure, body temperature, respiratory rate, glucose quantity, heart rate, and blood oxygen saturation. These devices also help determine parameters such as the heart rate, muscle activity, and calories burned during exercise and activities such as walking and jogging.

The global Diagnostic Wearable Medical Devices market size is projected to grow from US\$ 6500.7 million in 2023 to US\$ 15970 million in 2030; it is expected to grow at a CAGR of 13.7% from 2024 to 2030.
