The diagonal(mixed) flow fan is a common air flow equipment. It combines the characteristics of centrifugal fans and axial flow fans. The impeller makes the air move both centrifugally and axially. The movement of air in the shell is mixed with axial flow and centrifugal movement. It has the characteristics of medium wind pressure and medium flow.

The working principle of the diagonal(mixed) flow fan generate airflow by rotating the impeller, and at the same time make the airflow have velocity components in both the horizontal direction and the axial direction. This design makes the oblique flow fan

achieve a certain balance between static pressure and flow, with high efficiency and low noise level. The diagonal(mixed) flow fans' features: medium wind pressure and medium flow, energy saving and high efficiency, low noise, compact design, wide applications.
