Abstracts

The global Diamine Oxidase (DAO) market size is predicted to grow from US\$ 11.72 million in 2025 to US\$ 19.91 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

Diamine oxidase (DAO), also known 'amine oxidase, copper-containing, 1' (AOC1), formerly called histaminase, is an enzyme (EC 1.4.3.22) involved in the metabolism, oxidation, and inactivation of histamine and other polyamines such as putrescine or spermidine in animals. It belongs to the amine oxidase (copper-containing) (AOC) family of amine oxidase enzymes. In humans, DAO it is encoded by AOC1 gene.

Clinical studies show that a low-histamine diet can improve histamine intolerance. Results show that more than 50% of people have reported reduced symptoms. However, some studies found that a low-histamine diet didn't change the enzyme activity in the body. The great variety of symptoms derived from DAO Deficiency, which represent chronic pathologies of great prevalence in the population, demand that research in this field does not stop and progresses faster and faster in the knowledge of its origin and possible treatments.
