## Abstracts

The diaphragm coating material includes diaphragm coating particles and diaphragm coating solvent. Diaphragm coating particles can be divided into two categories: organic and inorganic. Inorganic materials mainly include ceramics (boehmite, alumina), and organic materials mainly include PVDF, PMMA, and aramid. The main advantage of inorganic materials is that the technology is more mature, the production cost is lower, the cost performance is high, and the economy has obvious advantages compared with organic coating; the biggest advantage of organic coating is that the product performance is good, but the price is expensive.
