The threaded connection diaphragm seal is a sealing structure used to connect pipes, valves or other equipment. It usually consists of a diaphragm assembly between two threaded connected parts such as threaded pipe joints. The working principle of the threaded connection diaphragm seal is to achieve the sealing effect through the elastic deformation of the diaphragm. When the two threaded parts are tightened, the diaphragm will be squeezed and deformed, forming a tight sealing contact. This structure can effectively prevent liquid, gas or other fluids from leaking from the connection, and provide better sealing performance.
