The global Diatomaceous Earth Absorbent Mats market size is predicted to grow from US\$ 129 million in 2025 to US\$ 181 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Diatomaceous earth absorbent foot pads are foot pads designed to solve the problem of slippery feet, and their core material is diatomaceous earth. Diatomaceous earth is a biochemical sedimentary rock formed by the deposition of diatom remains, with characteristics such as porosity, low density, and strong adsorption. These characteristics enable diatomaceous earth to quickly absorb and store a large amount of water while keeping the foot pad dry and comfortable. The porous structure of diatomaceous earth makes its water absorption capacity far exceed that of general materials, and it can quickly absorb moisture from the feet to prevent slipping. The microporous structure of diatomaceous earth is not only conducive to water absorption, but also ensures good air permeability, avoiding moisture and odor after long-term use of the foot pad. Diatomaceous earth absorbent foot pads are widely used in places such as homes, hotels, and gyms where the ground needs to be kept dry. Especially in humid environments such as bathrooms and toilets, diatomaceous earth absorbent foot pads can effectively prevent falls caused by slippery feet and improve safety of use.

As a natural porous material, diatomite is widely used in many fields including absorbent foot pads due to its unique physical and chemical properties. In recent years, as people pay more attention to environmental protection and health, the market demand for diatomite absorbent foot pads has continued to grow. According to relevant reports, the global diatomite market size is expected to reach 10.729 billion yuan by 2029, growing at a compound annual growth rate of 4.28%. At the same time, as one of the main producers and consumers of diatomite, China's market size is also expanding. This

overall market size growth provides a good development environment for the diatomite absorbent foot pad market. Diatomite absorbent foot pads mainly use the hygroscopicity and breathability of diatomite to provide a dry and comfortable experience for the home environment. As people's requirements for the home environment increase, the demand for diatomite absorbent foot pads in the market continues to increase. Especially in humid areas or rainy seasons, the demand for diatomite absorbent foot pads has increased significantly. In addition, diatomite absorbent foot pads are also favored by consumers for their environmental protection, non-toxicity, antibacterial and other characteristics. These characteristics make diatomaceous earth absorbent foot pads increasingly competitive in the market, further promoting the development of the market.
