The global Dicarboxylic Acid market size is predicted to grow from US\$ 11058 million in 2025 to US\$ 17186 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Dicarboxylic acids are organic compounds containing two carboxyl (-COOH) functional groups in the same molecule, typically represented as HOOC-R-COOH , where -R- can be an aliphatic chain, aromatic ring, or functionalized backbone; they are key intermediates in polymer chemistry, coatings, lubricants, and pharmaceuticals due to their reactivity in forming polyesters, polyamides, and plasticizers. The supply chain starts upstream with petrochemical or bio-based feedstocks (e.g., n-butane, cyclohexane, benzene, or renewable sugars/oils), which are converted through oxidation, fermentation, or catalytic processes into key dicarboxylic acids such as adipic acid, terephthalic acid, succinic acid, and sebacic acid; midstream involves purification (crystallization, distillation), grading (industrial, polymer-grade, high-purity), and large-scale production by chemical manufacturers; downstream, these acids are supplied to polymer producers (e.g., nylon, PET, polyesters), coatings and resin formulators, plasticizer manufacturers, and specialty chemical sectors, and finally distributed through chemical distributors to end-use industries including automotive, textiles, packaging, construction, and electronics. In 2025, global Dicarboxylic Acid output was about 8 million tons with 10 million tons of capacity, average prices of USD 1,200-3,000 per ton, and gross margins around 23%.

United States market for Dicarboxylic Acid is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
