DICOM Viewer, the full name of which is DICOM Medical Image Viewer, is a software designed for the medical field to browse and process DICOM format medical images.

As a medical image browser, DICOM Viewer is not only compatible with the DICOM standard, but also completes the functions that general natural image browsing software does not have according to the clinical needs of doctors and the characteristics of medical images. It allows users to easily import, store, view and understand patients' DICOM format medical images, and provides a variety of image operation tools, which greatly improves the efficiency of medical images in clinical use.

The driving factors of DICOM viewer mainly include the following aspects:

Market demand: With the popularity and application of medical imaging, the demand for DICOM viewers is also increasing. Doctors, patients, medical institutions, etc. all need a convenient, efficient, and accurate DICOM viewer to process and analyze medical imaging data.

Technological progress: With the continuous development of computer technology and image processing technology, the functions and performance of DICOM viewers are also constantly improving. The application of new algorithms and technologies enables the DICOM viewer to process and analyze medical imaging data more accurately, improving the accuracy and efficiency of diagnosis.

Medical informatization: Medical informatization is the current development trend of the medical industry, and DICOM viewer is one of the important tools for realizing medical informatization. Through the DICOM viewer, medical images can be digitized, networked and shared, improving the efficiency and quality of medical services.

User experience: As users' requirements for software experience continue to increase, the user experience of DICOM viewers has also become an important factor in its development. A DICOM viewer with a friendly interface, easy operation, and powerful functions can improve user efficiency and satisfaction, thereby promoting its market promotion and application.
