The global Dicyanimide market size is predicted to grow from US\$ 203 million in 2025 to US\$ 270 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Dicyandiamide is an intermediate for synthesis of medicines. It is used in the production of a wide range of organic chemicals including slow and continuous nitrogen release fertilizer, pesticides, dye fixing, fire proofing agents, epoxy laminates for circuit boards, powder coatings and adhesives, water treatment chemicals, leather and rubber chemicals, explosives and pharmaceuticals.

Dicyandiamide is mainly used in the production of guanidine salt, special resin, flame retardant, etc. It is applied in various industries such as pharmaceuticals, pesticides, fertilizers, iron and steel, construction, printing and dyeing, papermaking, coatings, cross-linking agents, circuit boards, water treatment, and so on. Dicyandiamide and its deep-processed products have been developed earlier in Europe and America. The United States, Germany, Norway and other countries have built production units of dicyandiamide earlier, with advanced equipments and mature technology, and are the main producers of dicyandiamide in the early stage. China is the main producer of dicyandiamide in the early stage. China started to produce dicyandiamide late in the late 1950's, and there are dicyandiamide producers in the coastal area of Zhejiang Province. At present, the global production capacity of dicyandiamide is mainly distributed in China, with a small amount of production capacity in Germany and other countries.
