Abstracts

The global Didecanoyl Peroxide market size is predicted to grow from US$ 33.85 million in 2025 to US$ 47.58 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global Didecanoyl Peroxide production reached approximately 17 kilotons, with an average global market price of around US$ 1,900 per ton. Didecanoyl Peroxide is an organic peroxide compound formed from decanoic acid, consisting of two decanoyl groups linked by a peroxide bond, giving it the chemical formula C??H??O?. It is a white to off-white solid that serves primarily as a free radical initiator in polymerization processes, especially for producing polyvinyl chloride (PVC), polystyrene, and other thermoplastics. Like other peroxides, it is highly reactive and decomposes to release free radicals, making it valuable for crosslinking, curing, and grafting reactions in plastics and rubber manufacturing. Due to its instability and sensitivity to heat, friction, and contamination, Didecanoyl Peroxide is classified as a hazardous material and must be stored and handled under strict safety conditions, typically in water-wet or phlegmatized forms to reduce explosion risk.

The key market drivers for Didecanoyl Peroxide are largely tied to its role as a free radical initiator in the polymer and plastics industries. Rising global demand for PVC, polystyrene, and acrylic resins in construction, automotive, packaging, and consumer goods sectors is fueling its use as a polymerization initiator. Additionally, its application in crosslinking polyethylene and elastomers supports growth in wire & cable insulation, pipes, and high-performance rubber products. The increasing adoption of lightweight plastics in automotive and aerospace for fuel efficiency, along with rapid urbanization driving infrastructure projects that rely heavily on plastics, further supports market expansion. Regulatory pressures encouraging the use of specialized initiators for controlled polymerization and the trend toward high-purity and specialty polymers also enhance demand. However, stringent safety and handling regulations due to its

explosive and hazardous nature act as both a challenge and a driver for innovation in safer formulations and transport methods.
