A die casting machine above 6000 tons (T) is a large-scale industrial equipment used in the process of die casting, a metal casting process that involves injecting molten metal into a steel mold, or die, under high pressure. These machines are specifically designed to handle extremely large volumes of metal and are typically used for producing heavy-duty components and parts for industries such as automotive, aerospace, and construction. The machines consist of a hydraulic or mechanical press that applies pressure to the molten metal, forcing it into the intricate cavities of the die to form the desired shape. Die casting machines above 6000T are characterized by their high clamping force and large bed size, allowing for the production of massive and complex parts with precision and efficiency.

The global Die Casting Machine (Above 6000T) market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
