Dielectric lossy absorbing materials refer to a type of material that mainly relies on the dielectric loss characteristics of the material to attenuate the incident electromagnetic wave. This type of material usually refers to non-magnetic materials with a certain conductivity, which consume electromagnetic energy by using the movement of free electrons inside the material in an external electromagnetic field. Common dielectric loss materials include carbon black, graphene, carbon fiber, silicon dioxide, zinc oxide, barium titanate, silicon carbide and conductive polymers, etc. These materials are widely used in avionics equipment, government facility protection systems, medical electronic equipment, automotive electronic equipment and electronic communication equipment.

The global Dielectric Loss Type Absorbing Material market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
