Common Rail Fuel Injection System is characterized by its High Pressure Accumulator (or Rail) from which it derives its name. A high pressure pump develops the required pressure for injection and delivers it to the High Pressure Accumulator (Rail). The Injectors which are controlled electronically by the Electronics Control Unit draw the high pressure fuel from the Rail as and when commanded by the Electronic Control Unit.

Diesel Common Rail Injection System meaning use common rail fuel injection system into the diesel engine, this advanced design enables exceptional injection accuracy and the delivery of smaller quantities of fuel in multiple injections for more efficient and cleaner combustion than competitive technologies, which, thus, provides better fuel economy and reduced CO2 emissions.
