One of the latest trends gaining traction in this market is the development of hybrid vehicles. Hybrid vehicles are gaining traction as they provide improved productivity and are more efficient, resulting in increased cost savings. For instance, the hybrid hydraulic excavator has a swing framework that incorporates electric motors. It charges a capacitor by the power generated through swing deceleration. This power is then used to assist the hydraulic motor in swing acceleration. Another motor that is associated with hydraulic pumps adjusts to the measure of electric energy in the capacitor. It helps generate power and supports the engine. This way fuel utilization can be reduced. This increasing adoption of the hybrid vehicles is expected to support the growth of the global diesel engines for construction and earthmoving sector in the coming years.
