The increasing frequency of power grid failures has increased the adoption of diesel power generators around the world. The modern world needs electricity to operate almost everything, ranging from transportation systems and computer databases to everyday equipment such as ovens, TVs, and lights. Rapid urbanization in developing countries due to the growth in population and Industry development have increased the overall power consumption. This in turn, exerts a high pressure on the older components in the T&D networks, which in addition to the lower capacity in power grids leads to overload. This leads to power grid failures, resulting in blackouts and power outages. To overcome power outages and power shortage issues, the consumers are increasingly using diesel generators for continuous power supply. Industry consumers have started adopting standby diesel generators for several applications, which require smooth and uninterrupted operations.
