Diesel Pelleting Mill refers to a pellet mill powered by diesel. Diesel Pelleting Mills are mainly composed of feeding, mixing, granulating, transmission and lubrication systems. They can be divided into feed pellet mills and biomass energy pellet mills. They are widely used in the pharmaceutical, chemical and food industries. The working process is that the mixed powder with a moisture content of no more than 15% enters the feeding auger from the hopper. By adjusting the speed of the stepless speed regulating motor, a suitable material flow rate is obtained, and then enters the agitator, where it is stirred and mixed with steam through the stirring rod. Mix and temper, then pass through the chute and optional iron suction device to remove iron impurities mixed in the powder, and finally enter the pressing chamber for granulation.

The global Diesel Pelleting Mill market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
