Abstracts

The global Diethylbenzene market size is predicted to grow from US\$ 809 million in 2025 to US\$ 1137 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Diethylbenzene (DEB) is an organic compound with a chemical formula of $C_{10}H_{14}$. It is a colorless, transparent liquid with an aromatic odor. Its molecular structure consists of a benzene ring connected to two ethyl groups. There are three isomers: ortho, meta, and para. Industrial products are usually mixtures.

Analysis of market driving factors

Downstream demand growth

Polystyrene industry: Global PS demand grows 4% annually, driving the growth of diethylbenzene consumption.

Semiconductor industry: 5G and AI chip demand exploded, and the electronic-grade diethylbenzene market grew by more than 10% annually.

Technological progress and cost optimization

Catalyst upgrade: Qilu Petrochemical developed a new solid acid catalyst, diethylbenzene yield increased to 85%, and energy consumption decreased by 20%.

Scaled production: Yangnong Chemical's 50,000 tons/year device was put into production, and the cost per ton decreased by 15% compared with three years ago.

Policy and environmental pressure

China's "dual carbon" goal: Promote green production processes, Mitsubishi Chemical's environmental protection technology received government subsidies.

EU REACH regulations: Strict restrictions on toxic solvents, forcing companies to use high-purity diethylbenzene.

Emerging application expansion

New energy field: Diethylbenzene is used for lithium battery separator coating to improve thermal stability and extend battery life.

Biomedicine: Synthesize new targeted drug carriers, the market size increased by 15% annually.

International trade and supply chain

Regional trade agreements: RCEP has come into effect, reducing tariffs, and the cost of Chinese diethylbenzene exports to Southeast Asia has dropped by 5%.

Geopolitical risks: The conflict between Russia and Ukraine has led to rising energy prices in Europe, pushing local companies (such as BASF) to expand production capacity.

The diethylbenzene market is undergoing an upgrade from "bulk chemicals" to "high-end specialty materials", with downstream demand growth, technological breakthroughs and environmental protection policies resonating. Companies need to focus on electronic-grade product development, green production processes and industrial chain integration to seize markets in strategic areas such as semiconductors and new energy, and help the global chemical industry develop with high quality.
