The global Differential Connectors market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Differential connectors come in different types and formats, including board-to-board, cable-to-board, and cable-to-cable connectors. Some common examples of differential connectors include USB Type-C, SATA, DisplayPort, HDMI, and Ethernet connectors. These connectors are used in a wide range of electronic devices, such as computers, servers, routers, switches, televisions, and audio equipment.

Differential connectors are electronic connectors that are used to transmit differential signals across a circuit or system. A differential signal is a type of electrical signal that consists of two complementary waveforms that carry equal but opposite information. Differential connectors are designed to maintain the integrity of the differential signals by minimizing common-mode noise, which is unwanted interference in both signal lines.
