Differential Leak Tester is a precision instrument used to detect leaks in closed containers or systems. Its working principle is to inflate the object to be tested and the reference object to the same pressure under the same conditions, and then monitor the pressure difference between the two through a high-precision differential pressure sensor to determine whether the object to be tested has a leak. This method has high sensitivity and accuracy and is suitable for detecting tiny leaks.

United States market for Differential Leak Tester is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Differential Leak Tester is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
