The global Digestive Enzyme Tablets market size is predicted to grow from US$ 480 million in 2025 to US$ 762 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

In 2024, global digestive enzyme tablets production reached 12.49 million bottles, with an average selling price of US$37 per bottle. Digestive enzyme tablets are dietary supplements whose core active ingredients are one or more digestive enzymes (such as protease, lipase, amylase, lactase, etc.). They are designed to assist the body in breaking down macromolecular nutrients (protein, fat, carbohydrates) in food, improving digestion and alleviating symptoms such as bloating and indigestion caused by digestive enzyme deficiency or insufficiency. They may also enhance nutrient absorption. The upstream supply chain primarily consists of raw material suppliers, including enzyme manufacturers (who produce high-purity enzymes through microbial fermentation or plant and animal extraction) and excipient suppliers (fillers, coatings, stabilizers, adhesives, etc.). Downstream, the industry reaches end consumers through a variety of online and offline channels, including pharmacies, specialty health product retailers, large supermarkets, and e-commerce platforms like Amazon and iHerb. Ultimately, these products are purchased and used by those seeking digestive health, the elderly, those with specific dietary patterns (such as high-protein diets), and those with digestive system disorders (such as pancreatic insufficiency and lactose intolerance).
