The global Digital Astro Time Switches market size is predicted to grow from US$ 300 million in 2025 to US$ 422 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

An astronomical time switch is a device that controls lighting and other devices based on the sunrise and sunset times. Unlike regular time switches, which operate solely based on set times, or automatic flashers that respond to ambient light, astronomical timer switches adjust for the changing daylight hours throughout the year, ensuring accurate operation without manual resetting.

A digital astronomical time switch is an intelligent device that uses built-in astronomical algorithms to automatically calculate sunrise and sunset times, precisely controlling the switching of electrical devices. It typically features high-precision time settings, light sensors, and remote control capabilities, and is widely used in outdoor lighting, agricultural irrigation, and smart city applications. Compared to traditional time switch, a digital astronomical time switch can automatically adjust based on geographical location and seasonal changes, providing a more intelligent and energy-efficient solution.
