The global Digital Chassis market size is predicted to grow from US$ 4519 million in 2025 to US$ 21376 million in 2031; it is expected to grow at a CAGR of 29.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Along with the industrial changes brought about by the intelligentization and electrification of automobiles, the automobile chassis system is also evolving in multiple directions and in an intelligent manner. Traditional chassis drive, braking, steering, suspension and other systems rely on mechanical connections and hydraulic systems to operate independently, while the digital chassis uses digital technology to bring together the various subsystems of the chassis for control, which can better coordinate the various systems. The digital chassis uses digital technology to coordinate the control of drive, braking, steering, suspension, etc., and the major car companies have different technologies for these executive hardware, among which the difference is particularly obvious in the suspension part. According to the different forms of the suspension system, it can be mainly divided into three categories: air suspension, fully active hydraulic suspension, and pure electric fully active suspension system.

United States market for Digital Chassis is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Digital Chassis is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
