A cordless phone is a model of telephone which replaces the coiled wire between the handset and base unit with wireless radio technology. A cordless phone is not the same as a wireless phone, however. The handset must be returned periodically to the base unit for recharging, and the base unit must be physically connected to both a telephone line and an electrical outlet.

Cordless Phones With Answering Machine refer to the cordless phones with building in answering machines and the ability to have more than one handset dotted about your property. This is perfect for those with homes across multiple floors that may not be able to get to the other level in time to take a call.
