Digital dictation is a popular workflow method within the healthcare sector, which cuts out the manual transmission of the recordings as well as reducing the turnaround time letters.

As a result of digital dictation is a quicker process, doctors are able to spare more time when dictating their notes. Patients will receive a more attentive and personalized level of care. These systems incorporate speech recognition software to turn your audio file into a document. To expand, a computer will listen to your recording and use speech to text intelligence to type it up. Yet another time and cost-efficient way of creating documentation. Digital dictation systems also supports a cloud-based back-end end speech recognition. It is also possible to have an on-premise back-end speech
