This report studies the Digital Die Cutting Machine market. Electronic Die Cutting (Digital die cutting) machines are powered by electricity and are controlled by computer software or cartridges. Digital cutters do not require steel dies because they have a blade inside the machine that cuts the paper or other materials.

A die cutting machine usually employs a small blade to cut out elements from card stock or a number of other common materials. Die cut machines are used to cut out letters, shapes, numbers, and even custom designs. These cutouts are then used for a number of projects from crafts to party decorations, scrapbooking and everything in between.
