Digital dispatch switch is a communication device that uses modern computer technology. It uses stored program control (SPC) technology to manage and control the work of the telephone switching system. This switch programs various control functions, stores them in memory, and controls the entire system by scanning data on external states. It not only has traditional dispatching functions, such as one-touch direct call, calling number display, etc., but also has digital services and new service capabilities, such as conference calls, group calls, broadcasts, etc. Digital dispatch switches are widely used in businesses, factories, governments, hotels, schools and other enterprises and institutions, and can achieve multiple purposes such as making phone calls, directing production, and coordinating work. It supports a variety of communication interfaces, is compatible with a variety of telephone terminals, and achieves a seamless combination of traditional dispatching and IP dispatching, providing users with a powerful modern communication dispatching system.
