## Abstracts

The global Digital Edge Finders market size is predicted to grow from US\$ 913 million in 2025 to US\$ 1410 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2025, global Digital Edge Finders production reached approximately 9 million units, with an average global market price of around US\$ 100 per unit. Annual production capacity is 11 million units. Gross Profit Margin: 33%. Digital edge finders, also known as electronic edge finders, are precision machining tools used to accurately locate the edge or reference point of a workpiece on manual or CNC machines. The industry chain begins with component suppliers providing sensors, electronic circuits, LEDs, housings, and shanks, followed by manufacturers that assemble, calibrate, and test digital edge finders. These products are then sold through industrial distributors, CNC tooling suppliers, and e-commerce platforms to end users such as machine shops, CNC operators, manufacturing plants, and training facilities, with after-sales support and calibration services completing the value chain. Digital edge finders are an indispensable tool for modern machining, offering faster, more precise workpiece alignment compared with traditional mechanical edge finders.
