## Abstracts

The global Digital Electronic Room Thermostat market size is predicted to grow from US\$ 2061 million in 2025 to US\$ 3217 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global production of digital electronic room thermostats reached 20.26 million units, with an average selling price of US\$104 per unit. Digital electronic room thermostats are electronic control terminals used in room/zone air conditioning and terminal systems (such as split units, VRF indoor units, fan coil units (FCU), heat pump terminals, etc.). They collect room temperature data using temperature sensors (NTC/digital thermometers) and implement functions such as setting temperature, cooling/heating/dehumidification/air supply mode, fan speed, timer/schedule, backoff temperature, (optional) occupancy/idle and alarm via MCU/control algorithms. Control commands are sent to indoor units/valves/fans/gateways via relay switching, 0–10V/PWM proportional output, or communication bus. Applications cover residential communities, office buildings, hotels, factory workshops, warehouses, and small computer rooms. The upstream of the industry chain includes LCD/touch modules, temperature/humidity/CO<sub>2</sub>/human body sensors, MCUs/storage, power supplies and relays/drivers, communication modules and connectors, and panel structural components; the midstream consists of manufacturers, with the production process including ODM/OEM design (hardware + firmware + UI) ? SMT/assembly ? calibration and burn-in ? certification (different regions/building control protocols) ? shipment; the downstream targets HVAC equipment manufacturers and building automation/room control system providers (hotels, offices), etc. Gross profit margin is approximately 15%–30%.
