An digital electronic wind instrument (EWI) is a musical instrument that electronically replicates the sounds and playing techniques of traditional wind instruments, such as saxophones, flutes, clarinets, and trumpets. Unlike acoustic wind instruments, EWIs use electronic sensors to detect the performer's breath pressure and finger positions, converting them into electrical signals that control sound generation. EWIs typically feature a mouthpiece with built-in breath sensors, keys or touch-sensitive surfaces for fingering, and onboard sound synthesis technology to produce a wide range of sounds, including realistic emulations of acoustic instruments, synthesized tones, and special effects. These instruments often offer features such as pitch bending, vibrato, portamento, and customizable sound settings, allowing performers to create expressive and dynamic performances with versatile sound capabilities. EWIs are popular among musicians, composers, and performers in various genres, including jazz, classical, electronic, and experimental music, offering a modern and innovative approach to wind instrument performance with the flexibility and creativity of electronic music technology.

The global Digital Electronic Wind Instrument market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
