The global Digital Flexible Cystoscope market size is predicted to grow from US\$ 900 million in 2025 to US\$ 1195 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

The flexible electronic cystoscope is a flexible endoscope used for bladder and urethral examination, diagnosis, and follow-up. It uses an electronic imaging system to acquire images within the body and features a flexible scope, good operational compliance, and high patient tolerance, making it suitable for both outpatient and inpatient settings.

Upstream components mainly include CMOS/CCD image sensors, LED light sources, flexible catheter materials, control wires, lens modules, and sterilization packaging materials. Downstream applications primarily target hospital urology departments, health check-up centers, specialist clinics, and bladder tumor screening and post-operative follow-up.

The global unit price of a flexible electronic cystoscope is \$14,610, with annual sales of approximately 63,000 units and a global production capacity of 70,000 units. The industry profit margin is 20%.

The global flexible electronic cystoscope market will continue to upgrade towards higher resolution, smaller diameter, portability, and operational comfort. Increased demand for outpatient examinations, post-operative follow-ups, and early screening will drive up clinical penetration rates. At the same time, infection control, turnover efficiency, and comprehensive cost management will drive the parallel development of disposable and reusable products. Market competition will gradually shift from a competition of single equipment performance to a comprehensive competition of imaging quality, doctor

experience, consumable matching, and overall urological endoscopy solutions.
