Abstracts

The global Digital Guest Management System market size is predicted to grow from US\$ 1679 million in 2025 to US\$ 2987 million in 2032; it is expected to grow at a CAGR of 8.6% from 2026 to 2032.

A Digital Guest Management System is an intelligent software platform that digitizes and streamlines the full lifecycle of guest interactions—from pre-arrival booking, self-service check-in, identity verification, and access authorization to post-visit feedback and data auditing—integrating biometrics, IoT, and cloud technology to replace manual processes. It centralizes guest data, enables cross-system linkage with access control, property management (PMS), and payment tools, enhancing security, operational efficiency, and guest experience across commercial and public venues.

The industry is driven by trends including cloud-native deployment, AI-powered personalized service (e.g., smart check-in, demand prediction), seamless integration with multi-scenario systems via open APIs, and compliance-focused data encryption; opportunities lie in penetrating small-to-medium enterprises (SMEs) seeking cost reduction, customizing solutions for vertical industries (healthcare, education), and expanding value-added services (upselling, personalized recommendations); however, challenges persist in navigating global data privacy regulations (GDPR/CCPA), ensuring compatibility with legacy systems, addressing user resistance to digital transformation, and mitigating security risks of biometric data storage.
