According to this study, the global Digital Imaging market size will reach US\$ 30840 million by 2031.

Digital imaging or digital image acquisition is the creation of a digitally encoded representation of the visual characteristics of an object, such as a physical scene or the interior structure of an object. The term is often assumed to imply or include the processing, compression, storage, printing, and display of such images. A key advantage of a digital image, versus an analog image such as a film photograph, is the ability make copies and copies of copies digitally indefinitely without any loss of image quality.

APAC is expected to hold the largest share of the digital imaging market by 2018, and the market in this region is expected to grow at the highest CAGR during forecast period, owing to . Advancements in terms of economic growth, infrastructural developments, and construction of power plants are expected to boost the growth of the digital imaging. The high growth of the digital imaging market in APAC can also be attributed to the major infrastructural expansion and automation in manufacturing industries in countries such as India and China. Countries in APAC are involved in the manufacturing of defense aircraft, which is expected to increase the scope of digital imaging in the aerospace & defense industry
