The global Digital Inkjet Rotary Printing Press market size is predicted to grow from US$ 230 million in 2025 to US$ 301 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

In 2025, the production volume of digital inkjet rotary printing presses reached 2,488 units, with an average selling price of USD 94,500 per unit. The global annual production capacity for digital inkjet rotary printing presses is approximately 4,000 units, and the gross profit margin is about 32.5%. A digital inkjet rotary printing press is a digital printing device that adopts inkjet technology, uses roll paper as the printing substrate, and achieves high-speed, high-efficiency printing through continuously rotating printing cylinders. It eliminates the need for traditional plate-making processes by directly ejecting ink droplets from printheads onto paper based on electronic file information, enabling on-demand printing. It features high speed, high precision, and variable data printing, making it suitable for various printing fields such as book publishing, magazines, labels, and packaging. The upstream segment of the digital inkjet rotary printing press industry chain includes inkjet printheads, control systems, and ink supply systems. The midstream segment consists of digital inkjet rotary printing press manufacturers, while the downstream segment primarily covers industries such as advertising, packaging and labeling, and textile printing.

The digital inkjet rotary printing press market is currently in a critical transition period from the early growth stage to a more mature phase. Driven by the growing demand for short-run, personalized, and variable-data printing, these presses are increasingly penetrating the traditional offset printing market due to their core advantages of plate-free operation and fast turnaround, particularly excelling in book publishing and commercial quick printing. Meanwhile, continuous technological advancements have

significantly improved print quality, speed, and media versatility, expanding their application scope from paper to broader industrial sectors such as labeling, packaging, and textiles. The overall competitive landscape is intensifying, with initial trends toward standardization and large-scale production. The industry as a whole is shifting from a pure equipment sales model toward providing comprehensive printing solutions that encompass consumables, services, and software workflows.
