Digital library is a collection of information and documents in a well-organized electronic form. Generally, files or documents are stored on a server or storage device such as CD-ROM and are easily available on the internet. The digital library system stores, captures, preserves, and redistributes the intellectual data of companies on the digital platform. This software enables the companies to store their data in various formats such as images, video, magazine, article, papers, books, and audio files. Digital library software offers a single platform for companies to store their documents and product information. It is freely available for research institutes to get access to different information needed during research. Digital library software is the digital counterpart of a physical library to create and store well-organized formats of all documents. This software enables the user to get access to the library data from any place as per need. The software allows companies to access or publish their documents to a world audience. It provides the functionalities for systematic selection, acquisition, search, and discovery of digital documents. The software is mostly used in institutes to maintain the records and make available all the documents in a digital format. Maintaining all documents in a physical format is difficult and it can damage the quality of documents, thus leading to the need for managing the documents digitally.
