Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In Digital Light Synthesis, liquid photopolymer resin is selectively exposed to a UV light source and is solidified into parts. Despite initial appearances, Digital Light Synthesis is unique from SLA and DLP as it is a truly continuous process that “grows” parts, removing the discrete steps of previous printing methods. Digital Light Synthesis’s innovation lies in its oxygen-permeable membrane that creates a dead zone underneath the part (known as a persistent liquid interface), allowing for continuous curing as the part is drawn out of the resin. Instead of using a layer-by-layer approach, Digital Light Synthesis uses a digital projector and various microcontrollers to project an ever-changing picture of a 3D model, streamlining the print into a layer-less design.

The global market for Digital Light Synthesis 3D Printers is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Digital Light Synthesis 3D Printers market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Digital Light Synthesis 3D Printers market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Digital Light Synthesis 3D Printers market is expected at value of US\$

million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Digital Light Synthesis 3D Printers market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
