The global Digital Mapping Cameras (DMC) market size is predicted to grow from US\$ 234 million in 2025 to US\$ 286 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Digital mapping (also called digital cartography) is the process by which a collection of data is compiled and formatted into a virtual image. The primary function of this technology is to produce maps that give accurate representations of a particular area, detailing major road arteries and other points of interest. The technology also allows the calculation of distances from one place to another. Though digital mapping can be found in a variety of computer applications the main use of these maps is with the Global Positioning System, or GPS satellite network, used in standard automotive navigation systems. This report focuses on camera system used for digital mapping.

Global digital mapping cameras (DMC) main manufacturers include Vexcel Imaging, Leica Geosystems, IGI Systems, Phase One, Lead'Air and VisionMap, etc., totally accounting for about 93% of the market. Asia-Pacific is the largest consumption market of digital mapping cameras (DMC), holding a share about 50%. As for the types of products, it can be divided into linear array scanners (pushbroom) and area arrays. The most common type is area arrays, with a share over 80%. As for the applications of products, it is widely used in manned aircraft and unmanned aircraft. The most common application is manned aircraft, with a share over 93%.
