The global Digital Metal Detector market size is predicted to grow from US\$ 754 million in 2025 to US\$ 1223 million in 2031; it is expected to grow at a CAGR of 8.4% from 2025 to 2031.

A digital metal detector is an electronic instrument that detects the presence of metal nearby. Metal detectors are useful for finding metal inclusions hidden within objects, or metal objects buried underground. They often consist of a handheld unit with a sensor probe which can be swept over the ground or other objects. If the sensor comes near a piece of metal this is indicated by a changing tone in earphones, or a needle moving on an indicator. Usually the device gives some indication of distance; the closer the metal is, the higher the tone in the earphone or the higher the needle goes.

For the digital metal detector industry, the market is concentrated. Minelab(Codan) and Garrett are the leader companies globally. The 10 players listed in the report accounted for about 65% of the revenue market.
