## Abstracts

The global Digital Microwave Communication Equipment market size is predicted to grow from US\$ 3713 million in 2025 to US\$ 5547 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Digital microwave communication equipment refers to equipment in communication systems that use microwave frequency bands for digital information transmission. This kind of equipment uses microwaves as the transmission medium to realize the transmission, reception and processing of information through digital signal processing technology.

The main functions of digital microwave communication equipment include signal modulation and demodulation, signal transmission, signal processing, etc. Specifically, it can realize the transmission of information by modulating low-frequency signals onto high-frequency carriers and converting the signals into a form suitable for microwave transmission. At the receiving end, digital microwave communication equipment can demodulate the received microwave signal into the original low-frequency signal and perform further processing and analysis.

Digital microwave communication equipment usually includes transmitters, receivers, modems, antennas and other parts. The transmitter is responsible for modulating the low-frequency signal into a high-frequency signal and sending it out; the receiver is responsible for receiving the microwave signal and demodulating it into a low-frequency signal; the modem is responsible for modulating and demodulating the signal; the antenna is responsible for transmitting the microwave signal. Signals are transmitted and received.

The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

According to our Communications Research Centre, in 2022, the global communication equipment was valued at US\$ 100 billion. The U.S. and China are powerhouses in the manufacture of communications equipment. According to data from the Ministry of Industry and Information Technology of China, the cumulative revenue of telecommunications services in 2022 was ?1.58 trillion, an increase of 8% over the previous year. The total amount of telecommunications business calculated at the price of the previous year reached ?1.75 trillion, a year-on-year increase of 21.3%. In the same year, the fixed Internet broadband access business revenue was ?240.2 billion, an increase of 7.1% over the previous year, and its proportion in the telecommunications business revenue decreased from 15.3% in the previous year to 15.2%, driving the telecommunications business revenue to increase by 1.1 percentage points.
