The global Digital Microwave Communication market size is predicted to grow from US$ 2313 million in 2025 to US$ 3152 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

Digital microwave communication refers to the transmission of digital signals over microwave frequencies, typically used for point-to-point communication links in telecommunications, broadcasting, and data networking. It involves using microwave radio waves (typically in the frequency range of 1 GHz to 100 GHz) to carry data, voice, or video signals between two fixed locations. This technology is widely used for wireless backhaul in mobile networks, satellite communication, and high-speed internet connections, offering high capacity, low latency, and reliability over long distances. Digital microwave communication systems convert data into digital format, modulate it onto microwave signals, and transmit it through line-of-sight (LOS) links. It is especially valuable in areas where laying physical cables is impractical or too expensive.

United States market for Digital Microwave Communication is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Digital Microwave Communication is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
