## Abstracts

The global Digital Mobile Radio (DMR) Repeaters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A Digital Mobile Radio (DMR) repeater is a type of radio system that allows for two-way communication between two or more DMR radios over a greater distance than would be possible with a single DMR radio. The repeater receives the signal from the transmitting radio, amplifies it, and retransmits it at a higher power and/or a different frequency to extend the range of the communication. DMR is a digital radio technology that uses Time-Division Multiple Access (TDMA) to allow two simultaneous conversations on the same frequency, effectively doubling the capacity of a given channel compared to analog systems. This makes DMR repeaters more efficient than analog repeaters, as they can handle more traffic in the same amount of time.
