Digital multimeter software refers to a type of software tool specifically used to control, manage and optimize the functions of digital multimeters. These software are connected to digital multimeters through different interfaces (such as GPIB, USB, RS232, LAN, RS485, TTL, Bluetooth, etc.) to achieve remote control, automatic data recording and analysis, error calibration and verification and other functions. Digital multimeter software allows users to remotely control digital multimeters through computers or other smart devices to realize the automatic execution of test tasks. This remote control function not only improves test efficiency, but also reduces the errors caused by manual operation. The software can automatically record the data during the test and display it in various forms such as charts and texts. Users can choose different data formats (such as Excel, .csv, .txt, etc.) to export and save as needed, which is convenient for subsequent data analysis and processing.

The global Digital Multimeter Software market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
