The digital overall operating room system is an operating room system that integrates various high-tech equipment and technologies, aiming to provide an efficient, safe and precise operating environment.

The overall digital operating room system usually includes the following technologies

and equipment:

Multimedia integration: The system integrates multimedia devices such as high-definition monitors, projectors, and cameras to display images, videos, and data during the operation in real time. These devices can be used for surgical team communication, real-time observation and recording of surgical procedures.

Surgical equipment control: The system allows surgical personnel to centrally control surgical equipment through a touch screen or other control interface. This includes adjusting the operating table, dimming and focusing surgical lights, operating instruments, and more. Surgical personnel can flexibly adjust and operate the equipment as needed, improving surgical efficiency and safety.

Image integration: the system can integrate a variety of imaging equipment (such as X-ray machines, CT scanners, MRI, etc.) with the operating room system, allowing doctors to view patient image data in real time. This aids in preoperative planning, intraoperative navigation, and accuracy of the surgical procedure.

Video conferencing and remote collaboration: The system can support video conferencing and remote collaboration functions, enabling doctors, experts and academic researchers to remotely participate in the surgical process, provide consultation and guidance. This is useful for collaboration across geographies, medical education, and telemedicine.

Data recording and management: The system can record and manage the data generated during the operation, such as operation time, patient information, instrument usage records, etc. This facilitates analysis, quality control and follow-up studies of surgical results.

The overall digital operating room system aims to provide an integrated and intelligent surgical environment to improve surgical efficiency, reduce surgical risks, improve surgical quality and promote the development of medical technology. It is increasingly used in modern operating rooms, bringing many benefits to doctors and patients.
