A digital pathology platform is an integrated system designed to digitize, manage, analyze, and share pathology information through high-resolution digital images of tissue samples. This platform includes components such as slide scanners that convert glass slides into digital images, image management software for storing and organizing these images, and analysis tools that often incorporate artificial intelligence (AI) to assist in diagnosing and quantifying disease markers. Additionally, digital pathology platforms facilitate remote consultations and collaborative review by allowing pathologists to share images and annotations with colleagues worldwide. By streamlining workflows, enhancing diagnostic accuracy, and improving data accessibility, digital pathology platforms play a crucial role in modernizing pathology practices and advancing medical research.

The global Digital Pathology Platform market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
