Digital pathology software is a technology platform that allows the management, analysis, and interpretation of pathology information through digitized images of tissue samples. This software enables pathologists to view high-resolution digital slides on a computer screen rather than using traditional microscopes. It offers tools for image analysis, annotation, and sharing, facilitating remote consultations and second opinions. Additionally, digital pathology software often includes features for workflow management, integrating with laboratory information systems (LIS) to streamline case management and reporting. By enhancing diagnostic accuracy, efficiency, and collaboration, digital pathology software plays a crucial role in modernizing pathology practices and improving patient care.

The global Digital Pathology Software market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
