A digital patient monitoring system refers to a technology-driven platform designed to continuously or intermittently monitor various physiological parameters and health metrics of patients remotely or within healthcare facilities. These systems typically utilize wearable devices, sensors, and mobile applications to capture data such as heart rate, blood pressure, blood glucose levels, oxygen saturation, and activity levels. The collected data is transmitted in real-time or periodically to healthcare providers, allowing for continuous monitoring of patient health status, early detection of abnormalities or changes, and timely intervention when necessary. Digital patient monitoring systems enhance patient care by enabling personalized treatment plans, improving chronic disease management, reducing hospital admissions, and promoting patient engagement in their own healthcare management.
