According to our LPI (LP Information) latest study, the global Digital PCR (dPCR) market size was valued at US\$ 2996.7 million in 2023. With growing demand in downstream market, the Digital PCR (dPCR) is forecast to a readjusted size of US\$ 6019.4 million by 2030 with a CAGR of 10.5% during review period.

The research report highlights the growth potential of the global Digital PCR (dPCR) market. Digital PCR (dPCR) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Digital PCR (dPCR). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Digital PCR (dPCR) market.

Digital PCR (Digital PCR-dPCR) technology is a new method for nucleic acid detection and quantification. Unlike traditional quantitative PCR (qPCR) technology, digital PCR uses absolute quantification and does not rely on standard curves and reference samples to directly detect targets The copy number of the sequence. Because this detection method has better sensitivity, specificity and accuracy than traditional qPCR, dPCR has been widely used quickly. This technology is used in the detection of very small amounts of nucleic acid samples, detection of rare mutations in complex backgrounds and identification of small differences in expression levels. The realized advantages have been widely recognized, and its many advantages in gene expression research, microRNA research, genome copy number identification, rare mutation detection of cancer markers, identification of pathogenic microorganisms, identification of transgenic components, accurate quantification of NGS sequencing libraries, and result verification, etc. The broad application prospects it has already received more and

more attention.

During the forecast period, the Asia-Pacific region (including China, India, Japan and other regions in the Asia-Pacific region) will develop at a faster growth rate. As global life sciences companies have increased their focus on this region, and this booming development has increased awareness about the diagnosis and treatment of genetic-based diseases, more and more public and private funds are supporting the development of new dPCR technology, Indian Genome. The academic market is rising, and factors such as the continued strengthening of Japanese cancer research have contributed to the rapid development of the Asia-Pacific market. Due to the significant growth opportunities offered by emerging countries, some related companies have begun to focus on expanding their product distribution networks in these emerging markets.
