Digital Periodontal Probes are advanced dental diagnostic instruments used to measure the depth of periodontal pockets around each tooth, helping to assess gum health and diagnose periodontal disease. Unlike traditional manual probes, digital versions integrate electronic sensors and software to automatically record measurements, ensuring greater accuracy, consistency, and efficiency. These probes often feature pressure-sensitive tips to minimize patient discomfort, and they may display data in real-time on a computer screen or integrate directly with electronic dental records. Digital periodontal probes are widely used in preventive care, periodontal assessments, and long-term monitoring of gum conditions.
