The report requires updating with new data and is sent in 48 hours after order is placed.

The global Digital Polymerase Chain Reaction (dPCR) market size is predicted to grow from US\$ 461 million in 2025 to US\$ 927 million in 2031; it is expected to grow at a CAGR of 12.3% from 2025 to 2031.

Digital PCR is a highly precise approach to sensitive nucleic acid detection and quantification. Each sample is partitioned into thousands of individual reactions (droplets for Droplet Digital™ PCR technology). Each partition is analyzed after end-point PCR cycling for the presence or absence of a fluorescent signal, and the absolute number of molecules present in the sample is calculated. dPCR does not require a standard curve for quantification.

Global Digital Polymerase Chain Reaction (dPCR) key players include Bio-rad, Thermo Fisher, etc. Global top two manufacturers hold a share over 95%.

North America is the largest market, with a share about 97.7%, followed by rest of the world regions, all have a share about 2.3 percent.

In terms of product, Droplet Digital PCR is the largest segment, with a share over 50%. And in terms of application, the largest application is Research, followed by Biopharma.
